

HAF®

ANTISAL

Eliminate salinity from your soils thanks to the use of calcium complexed with our active ingredient Libernat.

HAF™
HISPANO-AMERICANA
DE FERTILIZANTES

Haf[®] ANTISAL is designed to correct and prevent soil salinity caused by both, sodic soils and low-quality irrigation water.

Thanks to its active ingredient **LiberNat[®]**, the soil receives highly mobile soluble calcium that effectively displaces toxic ions in the soil even at basic pH.

Designed for crops suffering excess soil or irrigation water salinity, its use improves soil structure, increases nutrient availability as well as nutrient absorption.

TRIAL

Result after applying 5L/ha twice to peanut crops in Mexico. Visual symptoms usually disappear after applying the product.
