

HAF®

FULL BOX

Calcium and Boron biostimulant with free L-amino acids
that improves fruit quality, achieving more homogeneous
fruits with better skin turgor.

HAF™
HISPANO-AMERICANA
DE FERTILIZANTES

Haf[®] FULL BOX is a calcium (Ca) and boron (B) biostimulant with free L-amino acids and specially-selected natural plant-based extracts.

Recommended for all types of crops to correct and prevent physiopathies such as fruit cracking, rots, hollow stems, tip burn, or apical rot.

Haf[®] FULL BOX is designed so that the Ca and B in its formula act synergistically, improving fruit skin integrity (epicarp) and increasing turgor. These two factors are highly valued on markets as they have a positive impact on the quality of the fruit and its post-harvest period.

TRIAL

CONTROL

TREATED

The use of **Haf[®] FULL BOX** at 2L/ha at each potassium application led to an over 50% reduction in tomato cracking.

	Nº cracked	% cracked
Control	11	91,66%
Treated	6	46%

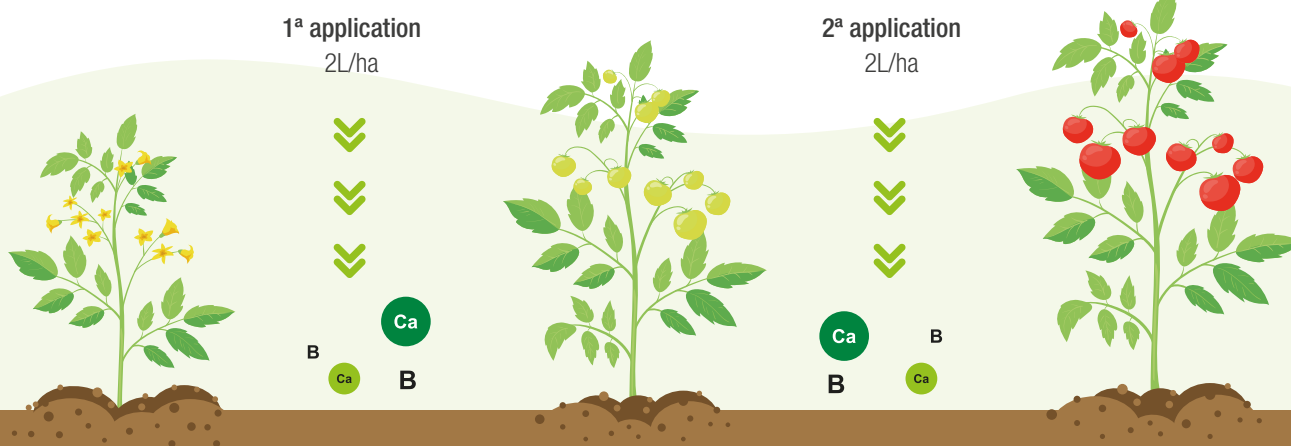

BENEFITS

- ✓ Corrects and prevents physiopathies such as rotting, hollow stems, tip burn and apical rot.
- ✓ Increases the transport of sugars within the plant.
- ✓ Improves fruit set and prevents cracking.
- ✓ Prevents cork spots and uneven ripening.
- ✓ Prevents deformation, curving and young leaf necrosis.

VALID FOR ANY TYPE OF CROP
