

HAF®

VITA K

Get the fruits to maximize their size, increasing weight and caliber to obtain the best yield from your crops.

HAF™
HISPANO-AMERICANA
DE FERTILIZANTES

Haf[®] VITA K is a liquid nutritional product specially designed to achieve balanced crop fattening, as well as size and weight gain.

Potent formulation with high potassium (K) content that is quickly absorbed and easily assimilated by the plant thanks to its L amino acids and other specially selected active ingredients that act as K-transporters.

The product ensures that all its K is effectively incorporated into the treated crop, leading to effective fattening and greater crop yields.

Provides a large amount of potassium which, together with L amino acids and other active ingredients, makes its assimilation and absorption more effective.

Promotes fattening, increases crop weight and size and therefore yields.

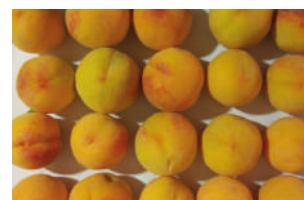

TRIAL

In this trial, 2 foliar water applications of 3 L/1000 L were performed.

	Mass	Calibre
Control	106 g	60
Treated	170 g	73

CONTROL
