

HAF®

ALFA 30%

Help your crops overcome any source of stress thanks to its high content of free L-amino acids of plant origin.

Haf[®] ALFA 30% is an anti-stress biostimulant with a complete and balanced formula characterised by high contents of free L-amino acids, organic matter, zinc (Zn) and manganese (Mn). They help crops to overcome the stress produced by phytosanitary products, diseases and transplantations.

The product is a biostimulant with high chelating power, which improves the absorption of the nutrients provided by fertilisation and those already present in the soil. It also facilitates the translocation of other products applied together.

TRIAL

After applying **Haf[®] ALFA 30%**, ifruit yellowing disappeared thanks to the glutamic acid content, while the control fruit presented yellow spots
