

HAF®

ALFA 40%

The product with the highest concentration of free L-amino acids of plant origin, specially selected to overcome any stress situation in your crops.

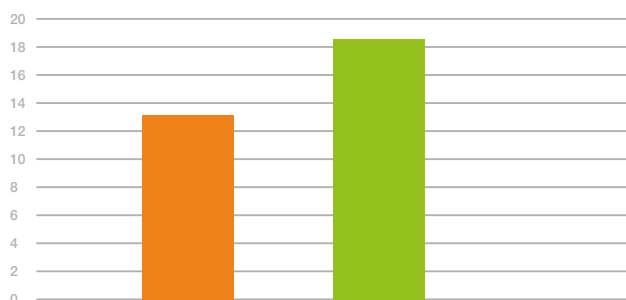

HAF™
HISPANO-AMERICANA
DE FERTILIZANTES

Haf[®] ALFA 40% is characterised by a formula containing 40% of high-purity free L- α -amino acids, providing high biostimulant power.

The product is designed to provide the free L- α -amino acids which allow the crop to "manufacture" its proteins, chlorophylls and crucial enzymes that drive all its metabolic processes. This increases vigour and energetic stimulation throughout the crop cycle, while also boosting rooting, budding, flowering, and fattening, among others.

TRIAL

ABOVEGROUND BIOMASS PER PLANT COLD STRESS

Results of applying **Haf[®] ALFA 40%** to maize suffering from stress due to the cold.

BENEFITS

Free L-amino acids provide the crop with an energetic stimulus during the most demanding periods.

L- α -free amino acids act as building blocks of molecules which are crucial for the plant to function.

Helps to recover from damage caused by the pest itself.

Accelerates metabolism.

Contains essential amino acids that support plant nutrition processes.

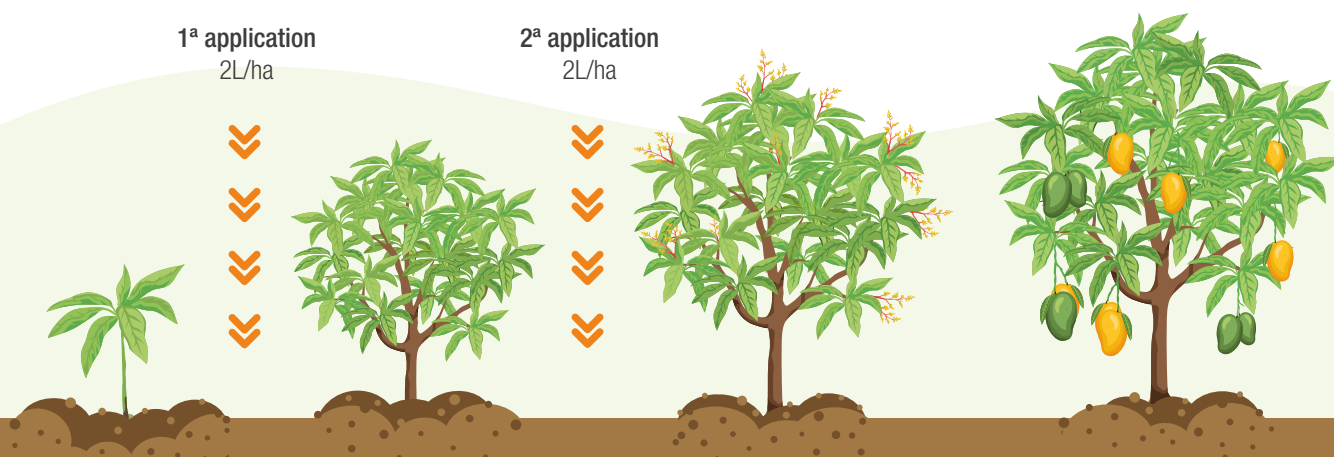

Helps to recover from damage caused by an excessive use of anti-pest phytosanitary products.

Works by further increasing photosynthesis.

Zero-waste product.

VALID FOR ANY TYPE OF CROP
